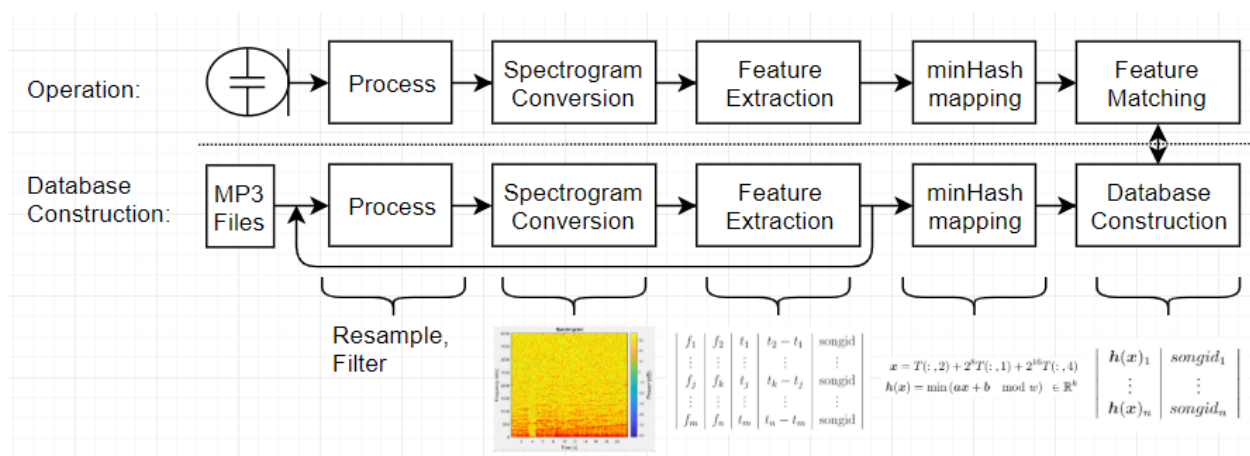

Figure 1: Block diagram describing the numerical processes of our algorithm.

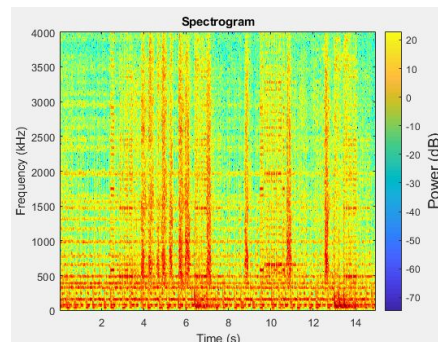

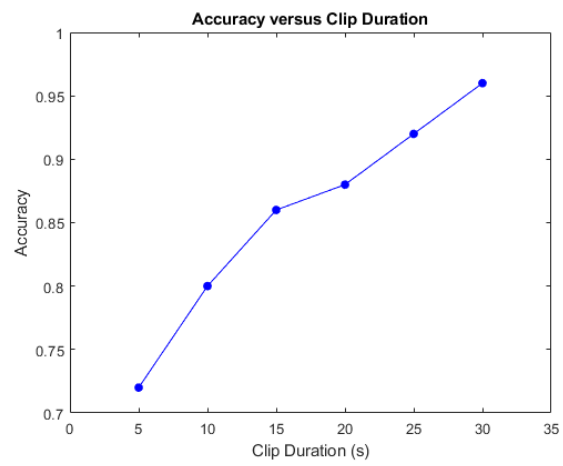

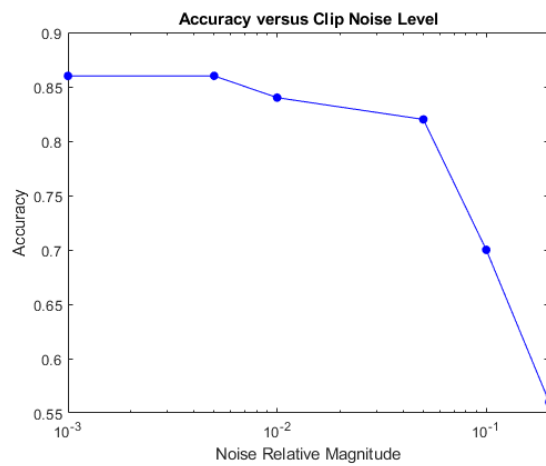

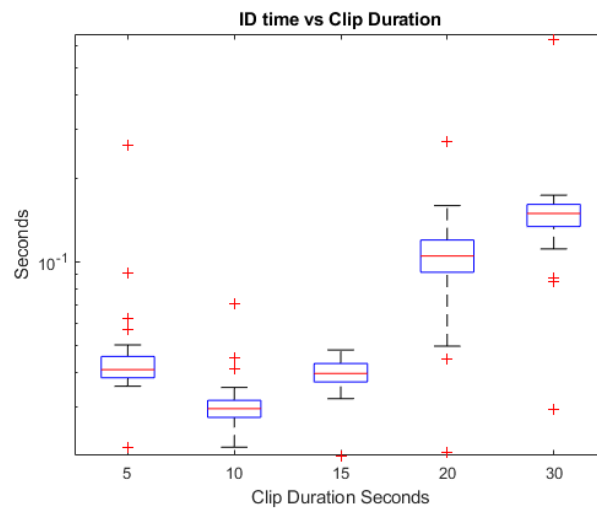

Figure 2: A clip of Darude - Sandstorm after processing and spectrogram conversion.

**a)** Predictably, identification accuracy decreased with the addition of noise. However, the algorithm was still relatively robust for many songs. **b)** Predictably, as the duration of the sample clip provided increased, so did the identification accuracy.

**Figure 3: Box and whisker plot showing the spread of execution times for duration of clip. Note the y-axis is logarithmic.**
